HEAT GUIDELINE

The following chart is a simple method to determine the amount of increased risk with variations of heat and humidity, and subsequent suggestions to modify participation in physical activities. This chart is to be used when there is no mechanical (sling) or digital psychrometer available. This chart can be used by inputting the temperature and humidity available via local radio stations, Internet locations, etc. Simply cross-reference the relative humidity (top row) with the temperature (first column) to determine the humidity. Follow guidelines outlined below

Temp	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%
105°	100	105	113	123	135	149
